This object is achieved by the method according to claim 1.

The embodiment according to claim 1 is a device for family planning and/or contraception whereby the device has a means (1) for determining the basal temperature, a means (7) for input of the first day of the cycle, a means (8) for input of the properties of the saliva, a device for

processing the data (13) made available by the means (1, 7, 8), a memory device (14) for storing at least some of the data [14] made available and a display device, whereby the device for processing the data is designed such that a conclusion regarding the woman's fertility on any given day is determined as a function of at least some of the data made available by each means and this conclusion can be displayed via the display device (see Fig. 1).
